

WATCHED 2,000+ EDUCATORS OPEN AI FOR THE FIRST TIME

5 things go wrong on day one.

Not skill gaps. Design gaps. The

defaults are wrong — change the defaults, change the outcome.

5 wrong defaults vs 5 right habits.

⊗ What goes wrong

- Start by asking AI.
- Paste the syllabus and hope.
- Accept the first output.
- Use AI as a writer.
- Keep the prompt in your head.

✓ What to do instead

- Spec before prompt.
- Context block before paste.
- 10 samples before ship.
- Critic mode before writer.
- Save the prompt. Always.

MISTAKE 1

**They start by asking.
They should start by
writing a spec.**

AI doesn't know what **good** looks like in your subject
until you tell it.

MISTAKE 3

They accept the **first output**.

They never run a **second sample** — let alone ten.

The pattern is in the failures, not the first sample.

MISTAKE 4

**They use AI as a writer.
AI is better as a critic.**

Run your draft through AI to **find the holes**. Don't ask
AI for the draft.

”

*These aren't **skill gaps**.
They're **design gaps**.*

— from 2,000+ first-day sessions

THE BOOTCAMP MOVE

By week two, the cohort can't go back.

5 wrong defaults out. 5 right ones in. **Habits** swap the muscle memory.

take this →

Defaults are the lever. Change them once.

DM 'institutional' for the school version with case studies.
