

5 Signs a Workflow Is Ready for an **AI Agent**

Not every process should be automated.

1

It Happens Repeatedly

The best AI use cases aren't one-off projects. They're workflows your team completes over and over again.

The more repetitive the work, the greater the potential return.

Tip

Start with a workflow that happens daily or weekly.

Don't

Build your first AI agent for a task that only happens a few times a year.

2

The Process Is Consistent

If everyone completes the work differently, AI won't know which approach to follow.

Consistency comes before automation.

Tip

Document the current process before asking AI to improve it.

Don't

Expect AI to fix a workflow your team hasn't agreed on.

3

The Data Is Reliable

AI performs best when it has accurate, trusted information.

If your data is incomplete or outdated, your outputs will be too.

Tip

Verify the quality of your data before building the agent.

 **Don't**

Assume AI will correct bad or missing data for you.

4

Success Is Easy to Measure

How will you know if the AI agent worked?

Time saved? Fewer errors? Faster response times?

Define success before you start building.

Tip

Choose one measurable outcome for your first proof of concept.

Don't

Launch an AI project without knowing what success looks like.

5

Someone Owns the Workflow

Every successful AI workflow has a human owner.

Someone should be responsible for reviewing outputs, gathering feedback, and improving the process over time.

Tip

Assign ownership before launch, not after.

Don't

Treat AI as a "set it and forget it" solution.
