Manager Essentials: How to Nurture Critical Thinking in the Age of AI

A practical workbook to strengthen judgment, challenge assumptions, and guide smarter decision-making..

AI is changing how decisions get made. Information today moves faster, is more accessible, and often more polished than ever before. But that speed comes with a tradeoff: it can create the illusion that thinking has already been done for us.

In reality, the opposite is true.

As AI-generated content becomes easier to produce, the need for human judgment becomes more critical, not less. A global study by KPMG and the University of Melbourne found that two in three employees rely on AI outputs without evaluating the information they provide. At the same time, more than half of people report being wary about trusting AI systems, underscoring the tension between rapid adoption and limited confidence in its outcomes.

This creates an unprecedented business challenge: leaders today have to balance speed with scrutiny.

In this sense, your role isn't to provide all the answers, but to create the conditions where your employees feel equipped to ask better questions. That means encouraging your team to slow down, interpret, and validate AI-generated outputs rather than accept them at face value.

This workbook offers practical exercises to help you build that capability.

56%

of employees have made mistakes in their work due to AI

57%

hide their use of AI and present AI-generated work as their own
